

# BBM Mesh

## Steel asphalt reinforcement mesh

BBM Mesh is a steel reinforcing netting with a transverse steel bar. Main features of BBM Mesh are:

- limits deformation in an overlay to a minimum,
- absorbs the tensile stresses beneath the asphalt layer,
- locks asphalt aggregates into the meshes of the netting (compartmentalization-interlock),
- ensures optimal distribution of the load,
- provides extra toughness to the overall structure,
- available in a range of roll widths of 2m, 3m and 4m and in a length of 50m,
- steel meshes have been applied for more than 25 years in this field.

Advantages of BBM Mesh are:

- proven against high (asphalt) temperatures,
- no creep (no change in long term behavior),
- same performance in all weather conditions,
- can be installed on a wet surface ,
- a durable and cost-effective maintenance solution.
